

TargetRecruit **Spring'22 Release**

New Features & Enhancements

All TargetRecruit packages have been upgraded to comply with revised security guidelines and testing from Salesforce.

Bug Fixes

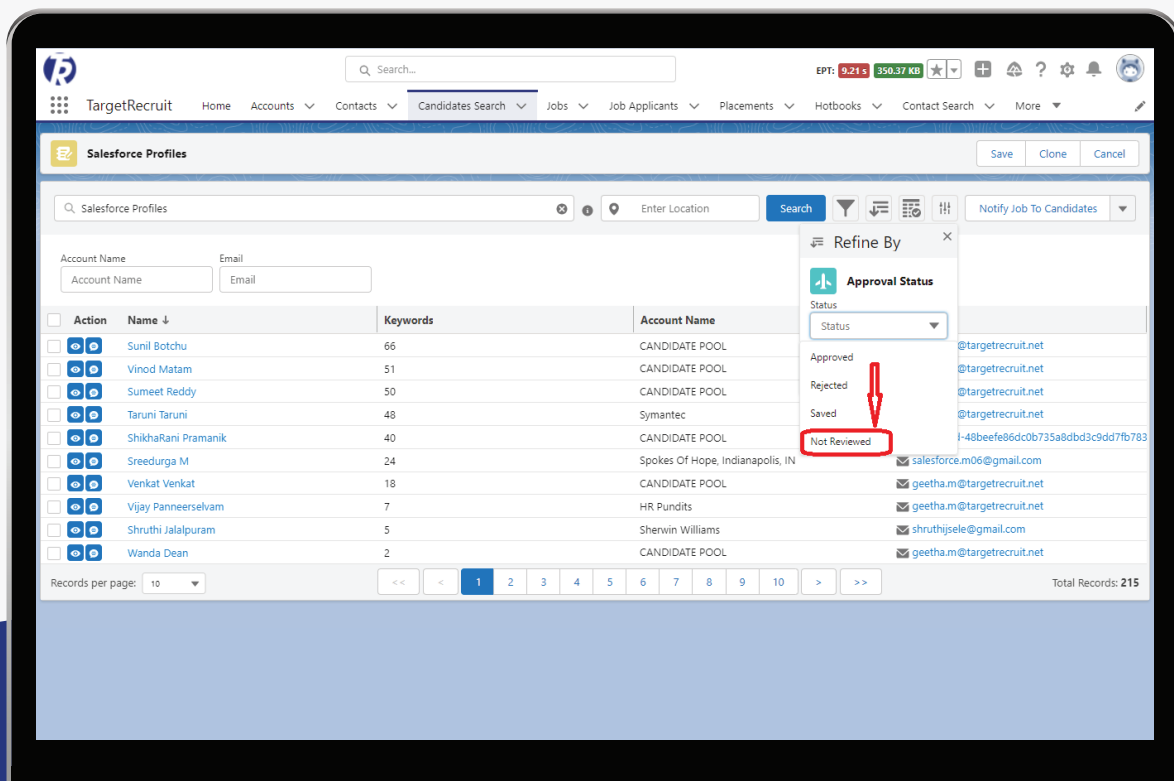

Data Loader Error

Importing over 100 opportunities using the Data Loader would generate an error. This has been corrected.

Enhancements

“Not Reviewed” Status Added to Candidate Search Filtering

We have added the ability to filter candidates’ approval status by “Not Reviewed” in the Candidate Search UI, joining “Approved”, “Rejected”, and “Saved”.

Streamlined Resume Review

We have eliminated an unnecessary pop-up that would be displayed when working in Quick Review, Smart Review, Review Resume, and Heat Maps due to the new Candidates Search UI.

Error When Using “Copy to Job” Button

Using the Copy to Job button on the Job Applicants list view would sometimes display an error if the Job had a deal sheet attached to it. This has been corrected.

Resume Parsing Data Field Errors

Resume parsing would sometimes incorrectly map data fields, particularly in phone numbers. This has been corrected.

Resume Not Attaching to Candidate Record

If a resume file name contained non-ASCII characters, that resume would not attach to the Candidate record. This has been corrected.

Resume Drag & Drop Performance

In certain circumstances, particularly if candidate names included special characters, resume drag & drop performance would degrade. This has been corrected.

Candidate Portal Banner

In the Candidate Portal, custom banners would sometimes not stretch to fit the screen lengthwise. This has been corrected.

Candidate Search Performance

The performance of Candidate Search could slow based on keyword usage. This has been corrected.

Candidate Search Component Error

A component error popup window would occasionally display when accessing Candidate Search. This has been corrected.

Candidate Search Filter Fields Error

An error could sometimes occur when changing the filter fields used in a Candidate Search. This has been corrected.

Credential Type Field

After applying a Credential Master to a Candidate, the credential's Type field would not update. This has been corrected.

Duplicate Jobs in Opportunity to Job Conversion

Converting an Opportunity to a Job would create a Job entry every time the user clicked the conversion button. There should only be one Job per Opportunity. This has been corrected.

Bug Fixes

Cloned Deal Sheet Calculation

Calculation on a cloned deal sheet could sometimes be incorrect or not match the original. This has been corrected.

Repeated Time Records in Payroll

Time records would repeat even after the user attached the Payroll line item to time records. This has been corrected.

Portals

Bug Fixes

Resume File Size Generates Error

On the Job Application screen, customers encountered an error regarding resume file sizes. This has been corrected.
